

Make every acre count

Ducks Unlimited Canada's **Marginal Areas Program** offers an option for farmers who have identified areas on their farm where they are realizing negative return on investment. It provides a financial incentive to seed hard-to-access and poorly producing areas to perennial forages, increasing your profits while you farm fewer acres.

Forages improve profitability, increase pollinator habitat and biodiversity, reduce herbicide-resistant weeds, act as buffer zones to meet product label guidelines and manage clubroot issues. MAP is designed to seed down acres that are unprofitable to grow crops while farming less land better.

In 2020 Ducks Unlimited Canada worked with over 200 Saskatchewan producers to seed 23,000 acres of grass. We'd be happy to partner with you, too.

**Receive \$125/acre on eligible land
and get a Pollinator Power Pak!**

Let's find a solution for those unproductive acres.
